

### **TO TRANSFER A CLEARPATH DATABASE TO A NEW NEXAN SYSTEM OR INSTALLATION.**

Before copying the data across it is necessary to stop three services running on the new and old Nexan System.

Repeat the following steps on both old (source) and new (target) Nexan systems.

Click on **START** menu and then go into **control panel** -> **administrative tools**-> **services**.

You can see a list of services running there, look for the following services and then stop them one by one.

1. ClearPath Analyser
2. ClearPath Partner Reader
3. ClearPath Server

After the successful stopping of these services

- Copy the database.cps folder (under C:\ClearPath\) from the old Nexan system to the new Nexan System under C:\ClearPath folder.  
*(This may take a long time depending on the size of the files).*
- After the file transfer is completed, (re)start the above services on the new Nexan system or simply reboot the system.
